A.I. Building More A.I.

With Google's new AutoML (Machine Learning), we now have computer algorithms that can learn to perform tasks by analyzing its own data. Though this seems like a huge breakthrough, this as an everyday software could harm the job outlook for future AI programmers. However, this could be a much more efficient way to program AI. The integration of A.I. could impact our everyday lives making simple tasks more simple and solving our everyday problems.
